Set up database

1 Database options

2 Security rules

Once you have defined your data structure you will have to write rules to secure your data.
[Learn more](#)

☐ Start in **locked mode**

Your data is private by default. Client read/write access will only be granted as specified by your security rules.

☒ Start in **test mode**

Your data is open by default to enable quick setup. However, you must update your security rules within 30 days to enable long-term client read/write access.

```
{
  "rules": {
    ".read": "now < 1702422000000", // 2023-12-13
    ".write": "now < 1702422000000", // 2023-12-13
  }
}
```

The default security rules for test mode allow anyone with your database reference to view, edit and delete all data in your database for the next 30 days

14.

KÓD

```
//write
// Write a message to the database
FirebaseDatabase database = FirebaseDatabase.getInstance("https://test-
27d2f-default-rtdb.europe-west1.firebaseio.com/");
DatabaseReference myRef = database.getReference("message");

myRef.setValue("Hello, World!");

//////////
// Read from the database
myRef.addValueEventListener(new ValueEventListener() {
    @Override
    public void onDataChange(DataSnapshot dataSnapshot) {
        // This method is called once with the initial value and again
        // whenever data at this location is updated.
        String value = dataSnapshot.getValue(String.class);
        Log.d("TAG", "Value is: " + value);
        Toast.makeText(MainActivity.this, value, Toast.LENGTH_LONG).show();
    }

    @Override
    public void onCancelled(DatabaseError error) {
        // Failed to read value
        Log.w("TAG", "Failed to read value.", error.toException());
    }
});
```
